Office Action Summary

Art Unit: 1732

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 8-10, 12, 14 and 16-17 are rejected under 35 U.S.C. 103(a) as being unpatentable over Wigner et al. as set forth in the rejection of claims 1-7 in the previous Office action.

3. Claims 11 and 13 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

4. Applicant's arguments filed April 22, 2003 have been fully considered but they are not persuasive. Applicant argues that the Wigner patent does not anticipate or render obvious a one-piece, unitary adhesive closing part with a base or cover and adhesive closing elements, edge portions being free of closing elements and having a mold engaging surface coplanar with the free ends of the adhesive elements. This is not persuasive because Figure 5 of the Wigner patent illustrates edge portions free of adhesive closing elements and also illustrates a mold engaging surface coplanar with free ends of the adhesive elements (note the position of the side edges 50a and 50b of the liner relative to the free ends of the adhesive elements). Applicant also argues that the steel strip of the Wigner patent does not form a ferromagnetic component which is formed as an integral part of a one piece, unitary adhesive closing part, but, to the examiner, the steel strip is an integral part of the device of the Wigner patent.

Art Unit: 1732

Contrary to Applicant's assertion, the Wigner patent does teach or suggest embedded ferromagnetic components, as in claim 9, and the use of such components in a layer, as in claim 10. The Wigner patent also teaches or suggest edge portions, as in claim 12, the use of adhesives, as in claim 14, and the use at least in part of a textile material, as in claim 16 (note the use of cloth backing strip 33).

5. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

6. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Allan Kuhns whose telephone number is (703) 308-3462. The examiner can normally be reached on Monday to Thursday from 7:00 to 5:30.

Art Unit: 1732
